

NTT DATA for Applied Research

# Empower research. Secure innovation. Accelerate impact.

Your technology partner for high-performing  
AI research infrastructure

A blurred photograph of four business professionals in a modern office setting, walking from left to right. The background is a wall of vertical glass panels with warm, golden light reflecting off them. The overall color palette is a mix of teal and gold.

NTT DATA helps research institutions like Fraunhofer Gesellschaft, Helmholtz Association, the Max Plank society, Leibniz Association and others build secure, AI-ready, digital infrastructures that accelerate scientific progress. Empower your researchers with high-performing foundations for their work and help deliver amazing research results — without compromising data protection, compliance, or technological sovereignty.

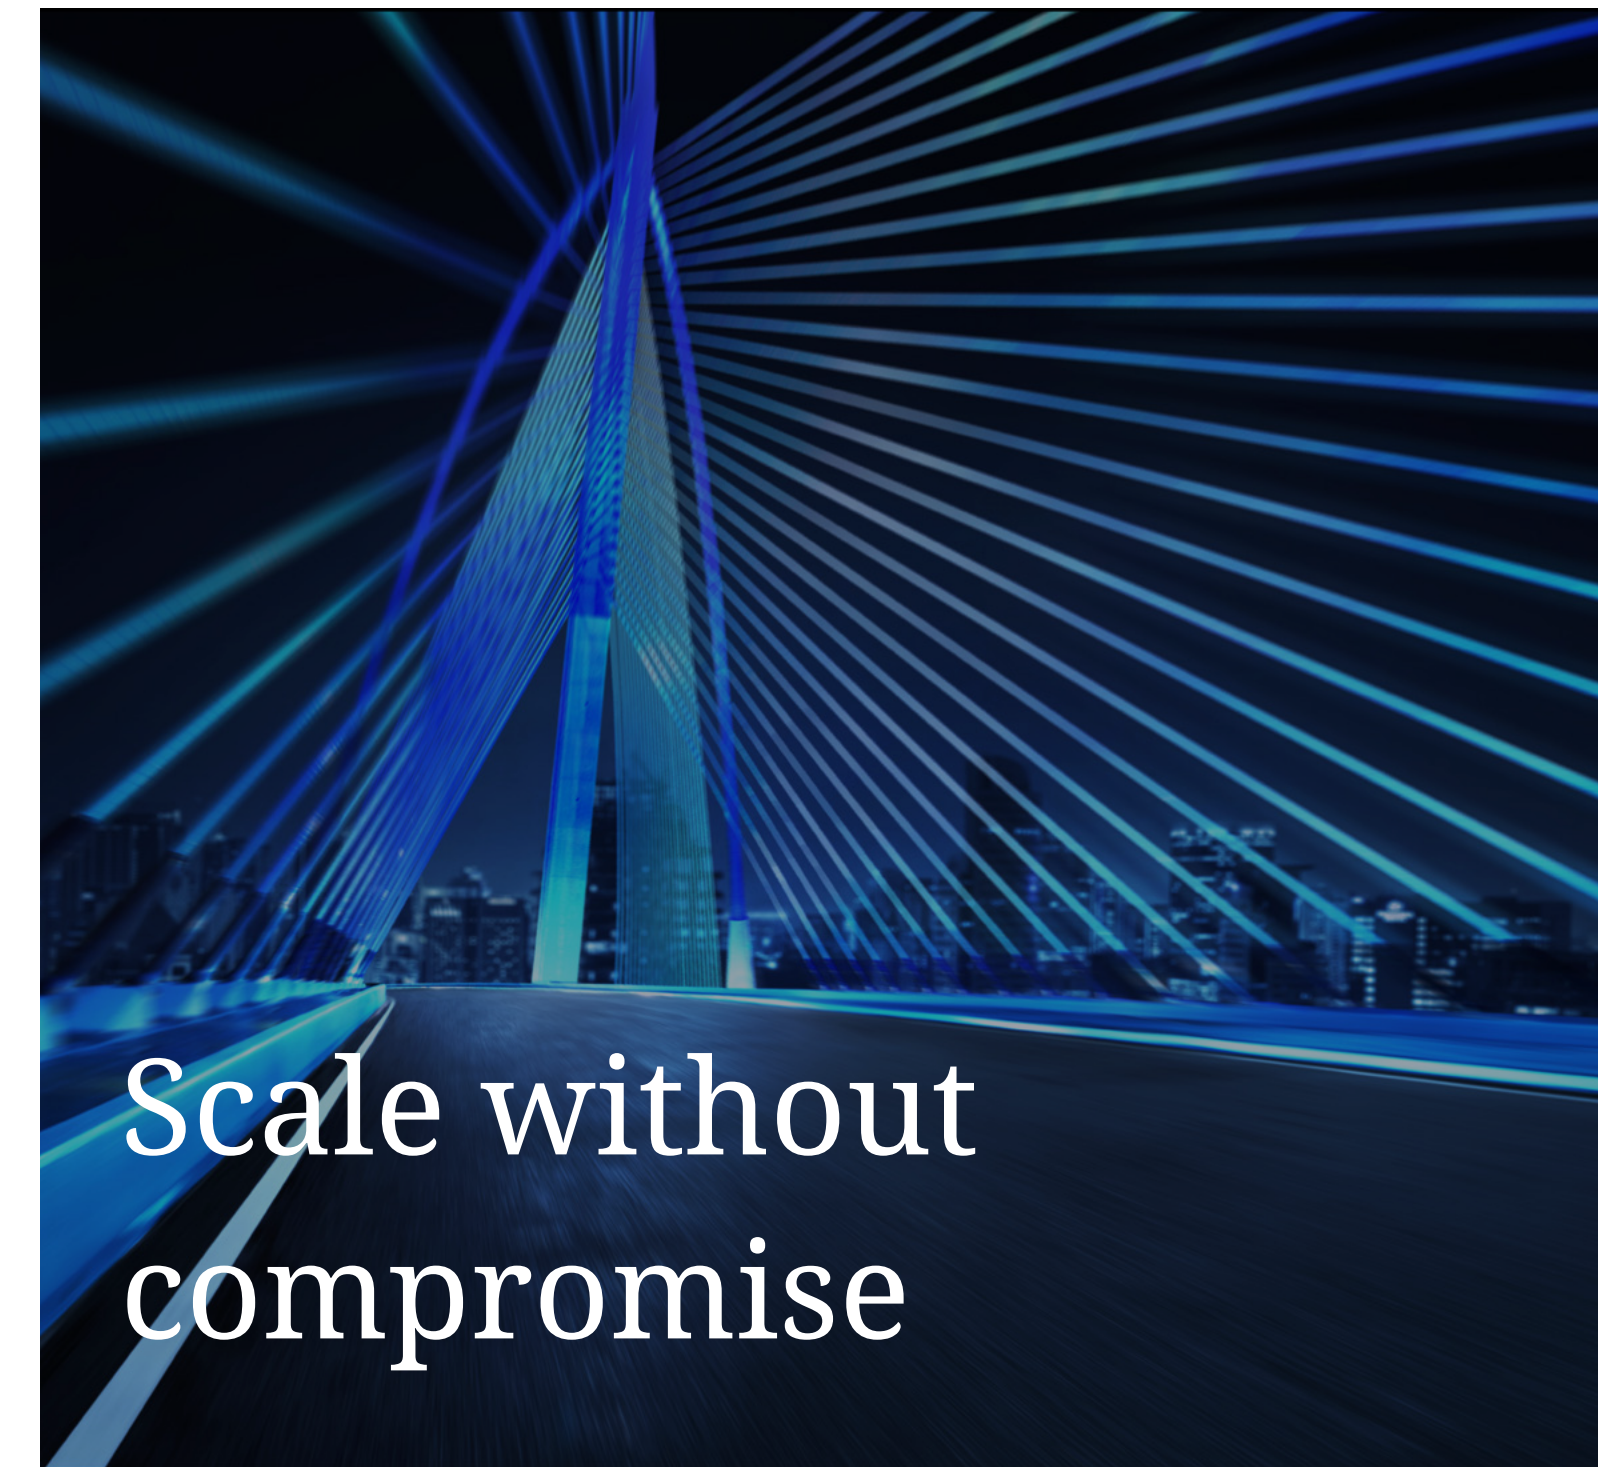

## Gain speed-to-market for innovation

With expert guidance on future-proof, high-performance AI architectures, your research can deliver faster results and real-world impact, enabling rapid product creation and transfer to industry. NTT DATA helps research organizations to maintain reliable infrastructures that enable IT management to focus on supporting the business demands of the researchers.

## Build cybersecurity into the fabric from the start

NTT DATA reduces reliance on insecure platforms, protects intellectual property, and supports the leadership of German and European research institutions. Security roadmaps, zero-trust architectures, and managed threat detection and response secure research data without limiting its use.

## Scale without compromise

Modern research infrastructures and secure digital working environments help to attract top talent and support collaborative research. NTT DATA's clients benefit from end-to-end managed services that ensure scalable cloud and on-premises environments, optimised compute resources, and high availability at all times.

# The trusted partner for research institutions

NTT DATA shares a common DNA with applied research institutions. Every year, we invest billions into our own research, innovation centres, and labs; we collaborate with industry leaders on new standards (we're currently **working with Intel and Sony on IOWN**). Our long-standing partnerships with institutions such as e.g. Technische Universität Munich, the Museum für Naturkunde, or Helmholtz help us constantly evolve our expertise in the design, provision, operations, and scaling of AI-ready, high-performance infrastructures for research.

“

Cybersecurity is critical for our research. With SamurAI MDR, we have peace of mind knowing threats are detected and addressed before they can disrupt our work.

— Benjamin Sohn, Head of Digital Transformation & IT, Helmholtz Munich

## Meet the team

We'd love to show you how **NTT DATA** can empower your projects, too.
