# NTT DATA

How Vodafone Ireland can turn cloud into a competitive advantage

Shifting to the cloud is today's essential IT priority for boosting competitiveness through fast time-to-market and sustainable costs. NTT DATA can help plan, build, manage and secure a cloud deployment to support Vodafone Ireland's unique business strategy and ambitions. We focus our cloud consulting, system integration, architecture design and deployment services on five business priorities.

Cloud readiness

We help plan a strategy that provides the motivation and guidance for successful migration of legacy on-premises applications and infrastructure to the cloud. This identifies the skills needed, security requirements, most suitable cloud structure, costs and timelines.

Journey to the cloud

It's essential to develop a roadmap with a clear Return on Investment for migrating applications to the cloud. We then apply a proven methodology with extensive automation that accelerates cloud deployment.

Escape from legacy

We can help Vodafone Ireland identify and achieve opportunities to modernise systems to lower costs while retaining control of and efficiently managing Enterprise Resource Planning (ERP) and database systems like SAP and Oracle.

Cloud readiness — Application assessment · Strategy · Cloud readiness · Evaluation · Motivation

Journey to the cloud — Architecture · Blueprints · Migration · Journey to the cloud · Networks · Landing Zones Design

Escape from legacy — Classify Apps · Roadmap · Tooling · Escape from legacy · People Planning · Cloud adoption framework

Cloud management — Governance · Recovery · Audits · Cloud Billing · Cloud management · Patching · Breakfix · Security · Cost optimization

Cloud native modernisation — Hybrid Logging · Hybrid Monitoring · Service Mesh · Cloud native modernisation · Bare metal Kubernetes · Containerise · Roadmap

Cloud management

We apply monitoring, automation and advanced management methodologies to secure and support day-to-day cloud operations. Our fully transparent and proactive approach minimises costs while meeting Vodafone Ireland's performance needs.

Cloud native modernisation

We can help Vodafone Ireland adopt and manage cloud native technology to build innovation into its processes. Using existing data centre assets where possible achieves cloud native power without undue complexity.

Taming cloud complexity together

Choose NTT DATA as your trusted cloud transformation partner. Our long experience of cloud transformation projects in multiple sectors enables us to deliver innovation and address Vodafone Ireland's needs.

For example, we can address any lack of in-house skills by ensuring Vodafone Ireland's engineering personnel are involved at all points and work in parallel with us every step of the way. This enables work to start immediately without waiting for your staff to be trained, while at the end of the project your own people will have the skills to operate critical systems.

Find out more about how NTT DATA can help Vodafone Ireland achieve more secure, more successful cloud-enabled business transformation.
